1 E-government services and policy track: Enterprise access policy enforcement for applications through hybrid models and XSLT technologies

Ramaswamy Chandramouli

March 2004 **Proceedings of the 6th international conference on Electronic commerce**

Full text available: pdf(167.98 KB) Additional Information: full citation, abstract, references

E-government systems like web portals provide various services to citizens. Information handled in these e-government systems are subject to multiple laws encompassing privacy, non-disclosure (confidentiality) and integrity policies. Hence the protection means for regulating access to this information should be policy driven. Policy-based access control is one such protection approach and has been incorporated into Enterprise Security Management (ESM) solutions. However, the existing ESM solutio ...

2 Shared processing with an advanced intelligent terminal

C. Estall, F. J. Smith

July 1984 **Proceedings of the 7th annual international ACM SIGIR conference on Research and development in information retrieval**

Full text available: pdf(501.46 KB) Additional Information: full citation, abstract, references

We have built a prototype distributed information retrieval system known as TBIRD, based on an inverted file and shared between a personal computer, acting as an advanced intelligent terminal, and a timeshared mainframe. It was developed to study the response and cost in comparison with a conventional system based on an unintelligent terminal. It is shown, by the transfer of most of the processing to the personal computer, that the computing costs can be reduced by a substantial factor and that ...

181 Prototype for wrapping and visualizing geo-referenced data in a distributed environment using XML technology

Jianting Zhang, Muhammad Javed, Amir Shaheen, Le Gruenwald

November 2000 **Proceedings of the 8th ACM international symposium on Advances in geographic information systems**

Full text available: pdf(618.21 KB) Additional Information: full citation, abstract, citings, index terms

This paper proposes a prototype for integration and visualization of geo-referenced information (GRI) in a distributed environment in general and World Wide Web in particular. This prototype adopts a three-tier architecture and includes three main components: GRI wrapper for distributed GRI web sites, GRI integration mediator and client side visualization interface.

In this prototype, XML is used as a communication protocol between distributed web sites that provide GRI and the mediat ...

182 Comparative analysis of six XML schema languages

Dongwon Lee, Wesley W. Chu

September 2000 **ACM SIGMOD Record**, Volume 29 Issue 3

Full text available: pdf(305.98 KB) Additional Information: full citation, abstract, citings, index terms

As XML [5] is emerging as *the* data format of the internet era, there is an substantial increase of the amount of data in XML format. To better describe such XML data structures and constraints, several XML schema languages have been proposed. In this paper, we present a comparative analysis of six noteworthy XML schema languages.

183 DSD: A schema language for XML

Nils Klarlund, Anders Moller, Michael I. Schwartzbach

August 2000 **Proceedings of the third workshop on Formal methods in software practice**

Full text available: pdf(380.33 KB) Additional Information: full citation, abstract, references, citings, index terms

XML (eXtensible Markup Language) is a linear syntax for trees, which has gathered a remarkable amount of interest in industry. The acceptance of XML opens new venues for

the application of formal methods such as specification of abstract syntax tree sets and tree transformations. A notation for defining a set of XML trees is called a schema language. Such trees correspond to a specific user domain, such as XHTML, the class of XML documents that make sens ...

184 Application of XML tools for enterprise-wide RBAC implementation tasks
Ramaswamy Chandramouli
July 2000 **Proceedings of the fifth ACM workshop on Role-based access control**

Full text available: pdf(66.85 KB) Additional Information: full citation, abstract, references, citings, index terms

The use of Extensible Markup Language (XML) and its associated APIs, for information modeling and information interchange applications is being actively explored by the reseach community. In this paper we develop an XML Document Type Definition (DTD) for representing the schema of a Role-based Access Control (RBAC) Model and a conforming XML document containing the actual RBAC-based access control data for a commercial banking application. Based on this DTD, the XML document and the methods ...

185 Implementing incremental code migration with XML
Wolfgang Emmerich, Cecilia Mascolo, Anthony Finkelstein
June 2000 **Proceedings of the 22nd international conference on Software engineering**

Full text available: pdf(124.85 KB) Additional Information: full citation, abstract, references, citings, index terms

We demonstrate how XML and related technologies can be used for code mobility at any granularity, thus overcoming the restrictions of existing approaches. By not fixing a particular granularity for mobile code, we enable complete programs as well as individual lines of code to be sent across the network. We define the concept of incremental code mobility as the ability to migrate and add, remove, or replace code fragments (i.e., increments) in a remote program. The combination of fine-grain ...

Keywords: XML technologies, incremental code migration

186 XTRACT: a system for extracting document type descriptors from XML documents
Minos Garofalakis, Aristides Gionis, Rajeev Rastogi, S. Seshadri, Kyuseok Shim
May 2000 **ACM SIGMOD Record , Proceedings of the 2000 ACM SIGMOD international conference on Management of data**, Volume 29 Issue 2

Full text available: pdf(209.66 KB) Additional Information: full citation, abstract, references, citings, index terms

XML is rapidly emerging as the new standard for data representation and exchange on the Web. An XML document can be accompanied by a *Document Type Descriptor* (DTD) which plays the role of a schema for an XML data collection. DTDs contain valuable information on the structure of documents and thus have a crucial role in the efficient storage of XML data, as well as the effective formulation and optimization of XML queries. In this paper, we propose XTRACT, a novel system for inferring a ...

187 XMill: an efficient compressor for XML data
Hartmut Liefke, Dan Suciu
May 2000 **ACM SIGMOD Record , Proceedings of the 2000 ACM SIGMOD international conference on Management of data**, Volume 29 Issue 2

Full text available: pdf(404.39 KB) Additional Information: full citation, abstract, references, citings, index terms

We describe a tool for compressing XML data, with applications in data exchange and archiving, which usually achieves about twice the compression ratio of gzip at roughly the

same speed. The compressor, called XMill, incorporates and combines existing compressors in order to apply them to heterogeneous XML data: it uses zlib, the library function for gzip, a collection of datatype specific compressors for simple data types, and, possibly, user defined compressors for application specific data ...

188 Integrity constraints for XML
Wenfei Fan, Jérôme Siméon
May 2000 **Proceedings of the nineteenth ACM SIGMOD-SIGACT-SIGART symposium on Principles of database systems**
Full text available: pdf(270.94 KB) Additional Information: full citation, abstract, references, citings, index terms

Integrity constraints are useful for semantic specification, query optimization and data integration. The ID/IDREF mechanism provided by XML DTDs relics on a simple form of constraint to describe references. Yet, this mechanism is not sufficient to express semantic constraints, such as keys or inverse relationships, or stronger, object-style references. In this paper, we investigate integrity constraints for XML, both for semantic purposes and to improve its current reference mechanism. We ...

191 Comparative analysis of five XML query languages
Angela Bonifati, Stefano Ceri
March 2000 **ACM SIGMOD Record**, Volume 29 Issue 1
Full text available: pdf(1.17 MB) Additional Information: full citation, abstract, citings, index terms

XML is becoming the most relevant new standard for data representation and exchange on the WWW. Novel languages for extracting and restructuring the XML content have been proposed, some in the tradition of database query languages (i.e. SQL, OQL), others more closely inspired by XML. No standard for XML query language has yet been decided, but the discussion is ongoing within the World Wide Web Consortium and within many academic institutions and Internet-related major companies. We present ...

195 Haskell and XML: generic combinators or type-based translation?
Malcolm Wallace, Colin Runciman
September 1999 **ACM SIGPLAN Notices , Proceedings of the fourth ACM SIGPLAN international conference on Functional programming**, Volume 34 Issue 9
Full text available: pdf(1.48 MB) Additional Information: full citation, abstract, references, citings, index terms

We present two complementary approaches to writing XML document-processing applications in a functional language.In the first approach, the generic tree structure of XML documents is used as the basis for the design of a library of combinators for generic processing: selection, generation, and transformation of XML trees.The second approach is to use a type-translation framework for treating XML document type definitions (DTDs) as declarations of algebraic data types, and a derivation of the cor ...
